

BUILDERS WORLD FORUM — WEBSITE V2

MASTER PRODUCT & TECHNICAL BRIEF FOR CLAUDE CODE

1. PROJECT OVERVIEW

Builders World Forum (BWF) is a private, premium business networking community focused specifically on professionals and companies connected to the construction ecosystem in Chennai.

The existing website is outdated, visually weak, contains inaccurate information in certain places, and is not suitable for the future operational requirements of BWF.

This project is therefore NOT simply a website redesign.

The new system must be built as a:

Public Website + Member Directory + Content Platform + Operational Admin Panel + Membership System + Event System + Analytics Platform + Future AI Infrastructure

The objective is to create a production-grade application that BWF management can operate independently without needing a developer for routine changes.

2. CORE BUSINESS OBJECTIVES

The website must primarily drive:

1. New membership applications
2. Visitor registrations for BWF meetings
3. Discovery of BWF members and their businesses
4. Increased credibility and premium brand positioning
5. SEO / AEO / GEO visibility
6. Member business visibility
7. Easier management of members and chapters

8. Centralised collection of BWF data
9. Future automation and AI integrations

Primary conversions:

Become a Member

and

Visit a Chapter

3. PRIMARY AUDIENCE PRIORITY

In order of importance:

1. Potential new BWF members
 2. Visitors attending BWF meetings
 3. BWF management
 4. Existing BWF members
 5. Search engines and AI search engines
-

4. BRAND & VISUAL DIRECTION

The existing website should NOT be visually reused.

Create a completely redesigned premium identity.

Desired positioning:

Private luxury business club

rather than a generic networking association.

Visual qualities:

- High-end
- Exclusive
- Premium
- Professional

- Powerful
- Modern
- Private community feel
- Corporate luxury

Primary colour direction:

Deep premium blue

Possible supporting colours:

- Navy
- Midnight blue
- Royal blue
- White
- Soft silver
- Controlled metallic accents

Avoid:

- Cheap gradients
- Overly bright colours
- Generic Bootstrap appearance
- Excessive construction imagery
- Loud animations
- Cartoon-style icons
- Template-looking layouts

Animations:

Moderate and sophisticated

Mobile experience:

Must be first-class and fully responsive.

A reference screenshot/design may later be provided and should then influence the design system.

5. CURRENT BWF STRUCTURE

BWF currently has:

3 active chapters

Do NOT use the chapter/member numbers from the old website as authoritative data.

BWF is expected to remain Chennai-focused for the next several years.

Architecture should still avoid hardcoding chapter count.

Future chapters must be addable through the admin system.

6. TECHNOLOGY STACK

Use a modern, maintainable production stack.

Recommended:

Application

Next.js with TypeScript

Use current stable production-supported Next.js conventions at implementation time.

Frontend

React

Styling

Tailwind CSS

UI Components

Reusable custom component system.

A mature component library may be used internally where appropriate, but the website must NOT visually resemble a default component-library template.

Database

PostgreSQL

ORM

Prisma

Authentication

Use a secure production-supported authentication solution compatible with the chosen architecture.

Requirements:

- Email
- Password
- OTP / second-factor verification
- Secure sessions
- Role-based access control

Super Admin must receive additional protection.

Storage

Use proper cloud object storage for uploaded assets.

Do NOT permanently store production uploads inside the application filesystem.

Email

Use a transactional email provider.

Architecture must allow providers such as:

- Resend
- Postmark
- AWS SES

without deeply coupling the product to one provider.

Analytics

Google Analytics 4

Google Search Console

Deployment

Preferred:

Vercel + managed PostgreSQL + managed object storage

Alternative production infrastructure is acceptable if technically justified.

Source Control

GitHub from Day 1.

7. ENVIRONMENT STRUCTURE

Must support separate environments:

Development

Staging

Production

Never develop major functionality directly against production data.

Environment secrets must remain outside source code.

Use environment variables.

Include:

`.env.example`

Never commit real credentials.

8. PRODUCT ARCHITECTURE

The system should be thought of as five layers.

Layer 1 — Public Website

Branding

Membership acquisition

Visitor acquisition

Member discovery

Blogs

Events
Testimonials
SEO pages

Layer 2 — Data Platform

Members
Companies
Chapters
Categories
Visitors
Applications
Events
Blogs
Testimonials
Feedback
Users

Layer 3 — Administration

Content management
Member management
Chapter management
User management
Reports
Permissions
Activity logs

Layer 4 — Member Platform

Member profiles
Article submissions
Profile edits
Future analytics
Future referrals
Future business tracking

Layer 5 — AI / Automation

Ask BWF chatbot
RAG
AI content support
Member matchmaking

WhatsApp automation
Business intelligence

Layers 4 and 5 will be introduced progressively.

9. USER ROLES

Create proper RBAC.

SUPER ADMIN

Used primarily by:

Founder
Co-Founder / ownership

Has complete access.

Can:

- Manage all chapters
- Manage all members
- Manage administrators
- Control user permissions
- View all feedback
- Restore/delete data
- Permanently delete archived data
- Access all reports
- View audit logs
- Change settings
- Approve sensitive operations

Additional authentication protection required.

10. CENTRAL ADMIN

Used by BWF management.

Can manage:

- Members
- Companies
- Chapters
- Categories
- Visitors
- Membership applications
- Blogs
- Testimonials
- Events
- Media
- Reports
- Website content
- Member exports

Cannot:

- Permanently delete protected data
 - Change Super Admin access
 - View restricted Super Admin-only information unless permitted
-

11. CHAPTER ADMIN

Examples:

President
Vice President
Secretary

Chapter Admin can only access their assigned chapter.

They can potentially manage:

- Their chapter information
- Their members
- Their visitor records
- Their events
- Their chapter exports

They cannot access:

- Other chapters
 - Central settings
 - Super Admin data
 - Restricted feedback
 - Global user control
-

12. MEMBER

Members eventually receive login access.

Member may:

- View their account
- Request profile edits
- Submit blogs/articles
- View future profile statistics
- View future leads
- Access future member functionality

Members must NOT directly publish profile changes.

All edits require admin approval.

13. CORE DATABASE ENTITIES

At minimum create scalable models for:

User

Role

Permission

Member

Company

Chapter

Category

MemberProfile

MembershipApplication

Visitor

VisitorRegistration

Meeting

Event

Blog

BlogCategory

BlogTag

Author

Testimonial

Feedback

Lead

MediaAsset

WebsiteContent

Notification

Report

Export

AuditLog

Archive / SoftDelete metadata

SystemSetting

Also prepare architecture for future entities:

Referral

ThankYouSlip

BusinessGenerated

OneToOneMeeting

Attendance

MembershipRenewal

Payment

MemberScore

WhatsAppConversation

ChatbotConversation

ChatbotLead

Do NOT fully implement future modules until their assigned phase.

14. COMPANY / MEMBER RELATIONSHIP

This relationship is extremely important.

A company may have MULTIPLE BWF representatives.

Example:

Company A may have:

Person 1 → Chapter 1

Person 2 → Chapter 2

Therefore:

Company ≠ Member.

Create separate Company and Member models.

Each Member:

- Represents one company
- Belongs to one chapter
- Belongs to one primary category

A Member cannot belong to multiple chapters.

A Member cannot hold multiple categories.

15. CATEGORY EXCLUSIVITY — CRITICAL RULE

BWF operates using exclusive categories.

Within one chapter:

Only ONE active member may occupy a specific category.

Example:

Chapter 1 + Plumbing = occupied.

Another plumbing member cannot be approved into Chapter 1 while that membership remains active.

However:

Chapter 2 + Plumbing may remain available.

This rule must be enforced at the DATABASE / BUSINESS LOGIC level.

Do NOT rely solely on frontend validation.

The application should prevent duplicate active category assignments.

16. MEMBERSHIP AVAILABILITY SYSTEM

Before submitting a membership application, applicant should check:

Category + Chapter

Example:

Category: Architect

Chapter 1 → Occupied

Chapter 2 → Available

Chapter 3 → Available

Applicant can continue with available chapters.

If occupied across all active chapters:

Display:

Currently unavailable in existing chapters.

Allow:

- Join waiting list
- Submit enquiry
- Request consideration for future chapters

Upcoming chapters may exist internally in the admin system without being publicly displayed.

Admin should be able to assign waiting-list applicants to future chapters later.

17. MEMBERSHIP APPLICATION WORKFLOW

Recommended new flow:

STEP 1

Choose business category.

STEP 2

Check category availability by chapter.

STEP 3

Choose available chapter.

STEP 4

Submit basic application.

Suggested fields:

Name

Phone

Email

Company

Category

Chapter

Designation

Years in business

Referral source

Short company information

Avoid unnecessarily large forms at first interaction.

STEP 5

Application enters Admin Dashboard.

Status:

New

Under Review

Contacted

Meeting Scheduled

Approved in Principle

Waiting for Payment

Paid

Rejected

Waitlisted

STEP 6

Admin confirms payment.

Payment may initially remain offline/manual verification.

STEP 7

Admin manually creates the Member account/profile.

Approval alone must NOT automatically create a public member.

Payment integration such as Razorpay may be introduced later.

18. MEMBER DIRECTORY

Create a public searchable member directory.

Primary search:

Find a BWF Professional

Filters:

- Chapter
- Category
- Company
- Member
- Location
- Service
- Keyword

Search results should primarily be grouped or displayed chapter-wise.

Avoid rankings that unfairly favour members unless BWF later defines ranking rules.

19. INDIVIDUAL MEMBER PROFILE

Every active member receives a public SEO-friendly profile.

Example URL:

</members/member-slug>

or equivalent clean structure.

Profile should support:

PERSONAL

Name

Photo

Designation

Short bio

COMPANY

Company name

Company logo

Business category

Business description

Services

Products

Specialisations

USP

Years in business

Areas served

Certifications

Major projects

Clientele

CONTACT

Phone

WhatsApp

Email

Website

Address

Google Maps link

SOCIAL

Instagram

LinkedIn

Facebook

Other approved links

MEDIA

Images

PDF brochure

Videos

Videos may ONLY use:

1. Direct uploaded video files
2. Approved Google Drive URLs

Do NOT support:

YouTube links

Instagram links

Other video platforms

Public contact details may be displayed.

20. MEMBER PROFILE EDITING

Admin creates the initial profile.

Members later receive profile edit functionality.

Member changes must create:

Pending Profile Revision

Admin reviews.

Options:

Approve

Reject

Edit and Approve

Only approved content becomes public.

Maintain version / activity records where technically reasonable.

21. CHAPTER PAGES

Each chapter should receive a dedicated page.

Example:

[/chapters/chapter-name](#)

Include:

Chapter name

Chapter description

Leadership

President

Vice President

Secretary

Coordinators

Members

Available categories

Meeting schedule

Meeting venue

Google Maps

Upcoming events

Testimonials

Gallery

Business information

Visit Chapter CTA

Become a Member CTA

22. COORDINATORS

In addition to:

President

Vice President

Secretary

Support:

Coordinators

Do not hardcode leadership roles so new role types can never be added.

Use configurable chapter role architecture.

23. VISITOR REGISTRATION

Visitors must register through the website.

Required key fields:

Name

Phone

Email

Company

Category

Chapter

Meeting

Referring Member

Relevant additional visitor fields may be added.

Visitors are NOT required to belong to an open category.

Visitor submission should:

1. Store record in database
2. Appear in admin dashboard
3. Trigger email to BWF management
4. Send confirmation email to visitor
5. Support future WhatsApp confirmation
6. Associate visitor with chapter
7. Associate visitor with meeting
8. Associate visitor with referring member

Track:

Visitor → Membership Applicant → Member

24. VISITOR CONVERSION

The system should record lifecycle status.

Example:

Registered

Attended

Follow-up Required

Interested in Membership

Application Submitted

Converted

Not Interested

This data will later support conversion analytics.

25. MEETING MANAGEMENT

Each chapter can have meetings.

Meeting fields:

Title

Chapter

Date

Time

Venue

Address

Google Maps

Agenda

Speaker

Description

Visitor registration enabled/disabled

Status

Admin should be able to create/edit meetings.

Future:

QR attendance.

26. EVENT MANAGEMENT

Event management is required.

Support event categories such as:

Chapter Meeting

Networking Event

Seminar

Exhibition

Chapter Launch

Special Event

Event fields:

Title

Description

Event type

Date

Time

Venue

Chapter or Global

Image

Registration

Capacity

Status

Registration deadline

Visitors should be able to register online.

Admin should receive registration details by email and dashboard.

27. FUTURE QR ATTENDANCE

Architecture should allow future QR-based check-in for:

Visitors

Members

Events

Meetings

Do NOT make QR attendance a dependency for initial launch unless assigned in its phase.

28. BLOG / CONTENT MANAGEMENT

Create full blog CMS.

Admin must be able to:

Create

Edit

Save draft

Schedule

Publish

Unpublish

Archive

Delete

Categorise

Tag

Upload images

Edit slug

Edit SEO title

Edit meta description

Set canonical URL if required

Set author

Add FAQ content

Add featured image

Set Open Graph information

Activity must be recorded.

29. SEO / AEO / GEO OBJECTIVE

The blog is not simply a news feed.

It must support content targeting:

Traditional Google search

Answer engines

AI-generated search

LLM discovery

Content architecture should support:

Clear headings

FAQ content

Entity references

Internal links

Author information

Updated dates

Source references when required

Structured data

Concise answer sections

Topic clusters

Member profile linking

30. BLOG CATEGORIES

Suggested initial categories:

Construction Guides

Architecture

Builders & Developers

Interior Design

Construction Materials

Engineering

Contractors

Chennai Construction Industry

Business Networking

BWF News

Member Success Stories

Construction FAQs

Admin can create/edit categories.

31. MEMBER ARTICLE SUBMISSIONS

Members may submit articles.

Workflow:

Member submits article

Draft stored

Admin notified

Admin reviews

Approved / Rejected / Edited

Published

If author is a member:

Link article to their member profile.

32. AUTHOR PAGES

Support author pages.

Authors may include:

BWF

BWF Team

Individual Members

Guest contributors

Agency team

33. TESTIMONIAL SYSTEM

Support:

Member Testimonial

Visitor Testimonial

Client Testimonial

Video Testimonial

Success Story

Testimonials may be:

Submitted publicly

or

Entered directly by Admin

Public submissions require approval.

Admin-created content may be published directly depending on permissions.

Fields:

Name

Company

Role

Chapter

Testimonial

Image

Video

Rating if required

Type

Status

Consent

Featured flag

34. FEEDBACK SYSTEM

Create a simple public feedback form.

Possible uses:

Meeting feedback

Event feedback

Management feedback

General feedback

Feedback must only be visible to:

Super Admin

unless Super Admin explicitly grants permission later.

Feedback must never automatically appear publicly.

35. LEADS

Website should support lead capture.

Possible lead sources:

Member profile enquiry

Contact form

Chatbot

Membership enquiry

Visitor registration

Event registration

Category waiting list

Each lead should record:

Source

Name

Phone

Email

Requirement

Member involved

Chapter

Category

Status

Created date

Notes

Website-generated member enquiries should eventually go to:

1. BWF Central Team
2. Relevant Member

Future system should track whether lead became business.

36. ASK BWF — FUTURE RAG CHATBOT

Name:

Ask BWF

The chatbot should eventually use RAG.

Knowledge sources:

BWF information

Policies

FAQs

Chapters

Members

Categories

Blogs

Events

Public website information

It may recommend relevant members.

Example:

User:

"I need an interior designer."

System returns matching BWF members.

Chatbot must:

Use BWF-grounded information

Avoid fabricated answers

State when information is unavailable

Never access private admin data

Never expose confidential information

37. CHATBOT ACCESS

Because AI/API costs are relevant:

Architecture should support configurable chatbot access.

Possible modes:

Public

Login Required

Limited Free Questions + Login

Admin should eventually be able to choose configuration.

For initial implementation, access strategy can be finalised during chatbot phase.

38. CHATBOT LEAD CAPTURE

Ask BWF should eventually offer:

"Would you like BWF to connect you?"

Capture:

Name

Phone

Email if required

Requirement

Relevant member/category

Store lead in Admin Dashboard.

39. ADMIN DASHBOARD

Main dashboard should eventually display useful operational metrics.

Examples:

Active members

Total companies

Active chapters

Visitors

New visitors this month

Membership applications

Pending approvals

Upcoming meetings

Upcoming events

New leads

Open categories

Blog activity

Recent admin activity

Later:

Business generated

Referral count

Attendance

Renewals

Website performance

Keep interface clean and decision-oriented.

40. ADMIN MODULES

Navigation should include:

Dashboard

Members

Companies

Chapters

Categories

Membership Applications

Visitors

Meetings

Events

Blogs

Authors

Testimonials

Feedback

Leads

Media

Website Content

Reports

Exports

Users

Roles & Permissions

Activity Logs

Archive / Trash

Settings

41. DYNAMIC WEBSITE NUMBERS

Where data can be calculated automatically, NEVER require manual entry.

Examples:

Total members = count(active members)

Total chapters = count(active public chapters)

Upcoming events = active future events

Manual editable fields should only exist for figures not derivable from platform data.

42. ACTIVITY LOGGING

Important admin actions must be logged.

Example:

Admin X edited Member Y

Admin A published Blog B

Admin Z archived Chapter C

Store:

User

Action

Entity

Entity ID

Timestamp

Relevant change metadata

Super Admin must have complete access.

43. SOFT DELETE / ARCHIVE

Never immediately permanently delete important business data.

Default:

Archive / Soft Delete

Only Super Admin can permanently delete protected data.

Prefer recoverable operations.

44. WEEKLY MEMBER EXPORT

Required.

Fields:

Member Name

Category

Phone Number

Membership Status

Recommended additional operational fields may exist internally but must not alter requested export unless selected.

Formats:

Excel

CSV

PDF

45. EXPORT PERMISSIONS

Chapter Admin:

Can export ONLY their chapter.

Central Admin:

Can export all chapters individually.

Central Admin:

Can produce master export covering all chapters.

Super Admin:

Complete access.

46. AUTOMATED WEEKLY EXPORT

System should eventually automatically generate and email weekly member reports.

Support:

Chapter-specific reports

Master management report

Recipients should be configurable.

Do not hardcode recipients.

Schedule should be configurable.

47. MEDIA MANAGEMENT

Admin should be able to upload:

Images

Logos

PDF brochures

Videos

Documents where required

Image optimisation:

Resize where appropriate

Compress

Generate modern web formats

Preserve suitable quality

Direct video uploads must include reasonable file restrictions.

Google Drive links may also be stored.

Third-party video links such as YouTube/Instagram must not be accepted for member media.

48. WHATSAPP

Public website should include floating WhatsApp CTA.

Initially:

Direct to central BWF WhatsApp number.

Future:

WhatsApp Business API

Automated visitor confirmations

Membership reminders

Meeting reminders

Lead routing

Do not implement full WhatsApp automation until assigned.

49. EMAIL AUTOMATION

Forms should trigger emails.

Support future transactional emails for:

Visitor registration

Membership application

Application status

Meeting registration

Event registration

Profile approval

Password reset

Article approval

Weekly reports

Chatbot leads

Do not hardcode business email.

Use configuration/environment settings.

50. ANALYTICS

Integrate:

Google Analytics 4

Google Search Console

Track meaningful events such as:

Become Member clicks

Visitor registration

Membership submissions

WhatsApp clicks

Member contact clicks

Profile enquiries

Category searches

Member searches

Event registrations

Blog performance

Member page views

51. ADMIN ANALYTICS

Later dashboard should surface simplified analytics:

Website visitors

Most viewed member profiles

Most searched categories

Most viewed chapters

Top blogs

Enquiries

Membership applications

Visitor registrations

Conversion metrics

Members should eventually see their own profile performance.

52. PROGRAMMATIC SEO

Architecture should support scalable category landing pages.

Examples:

`/architects-in-chennai`

`/civil-contractors-in-chennai`

`/interior-designers-in-chennai`

Pages should dynamically pull relevant BWF members.

Location/category combinations may be added later.

53. STRUCTURED DATA

Where appropriate implement schema such as:

Organization

Person

LocalBusiness

Article

FAQPage

Event

BreadcrumbList

Do not abuse schema or mark up content not visible to users.

54. LEGACY SEO / REDIRECTS

Old website migration and redirects are not the first development concern.

However before production cutover:

Identify valuable old URLs.

Implement appropriate 301 redirects.

Preserve relevant search equity.

Do not blindly redirect every URL to homepage.

55. SECURITY

Because this is a real client production platform, security is mandatory.

Requirements:

Strong password hashing

Secure authentication

OTP / second factor for admins

Extra protection for Super Admin

RBAC enforcement server-side

Input validation

CSRF protection where relevant

XSS protection

SQL injection prevention through proper data layer

Secure cookies

Rate limiting

Form abuse protection

Secure file upload validation

Permission checks for every protected action

Audit logs

Backups

No secrets in frontend code

No sensitive error information exposed publicly

56. SUPER ADMIN SECURITY

Use stronger controls for Super Admin.

Examples:

Mandatory MFA

Session management

Shorter privileged-session expiration

Recent-authentication requirement for high-risk actions

Permanent deletion confirmation

Role-change confirmation

Sensitive activity alerts later

57. BACKUPS

Automatic database backups required.

Uploaded media should also use durable cloud storage.

Document recovery procedures.

58. PRIVACY / CONSENT

BWF confirms member consent exists for public contact information.

Still implement:

Privacy Policy

Terms & Conditions

Cookie Policy if relevant

Consent checkboxes on forms

Appropriate consent for:

Marketing contact

Membership application

Visitor registration

Testimonials

Feedback if applicable

Do not pre-check consent boxes.

59. ACCESSIBILITY

Follow reasonable WCAG accessibility standards.

Include:

Keyboard accessibility

Form labels

Colour contrast

Focus states

Alt text

Semantic HTML

Reduced-motion consideration

60. PERFORMANCE

Target strong Core Web Vitals.

Use:

Server rendering where appropriate

Optimised images

Lazy loading

Code splitting

Caching

CDN

Database indexing

Efficient queries

Avoid unnecessary client-side JavaScript.

61. MOBILE-FIRST REQUIREMENT

Major workflows must work extremely well on mobile:

Find member

Member profile

Visit chapter

Membership application

Visitor registration

Event registration

Admin essential functions

WhatsApp CTA

62. WEBSITE CONTENT MANAGEMENT

BWF should not need Claude Code to change normal content.

Admin should eventually be able to edit:

Homepage key sections

About information

Contact information

Leadership

Statistics not automatically calculated

FAQs

Policies

Footer information

Calls to action

Selected banners

Do NOT make every pixel editable.

Maintain controlled content blocks to protect design consistency.

63. FUTURE REFERRAL SYSTEM

Not Phase 1.

Architecture should later support:

Referral Given

Referral Received

Referral Status

Estimated Value

Converted Value

Thank You Slip

Business Given

Business Received

64. FUTURE MEMBER ACTIVITY

Future system may include:

Attendance

One-to-One Meetings

Referrals

Thank You Slips

Business Generated

Business Given

Membership Renewal

Payments

Visitor Introductions

65. FUTURE MEMBER SCORE

Eventually BWF wants to calculate a performance score from factors including:

Attendance

Visitors

Referrals

Business

Thank You Slips

One-to-One Meetings

Renewals / engagement

Do NOT create scoring formula now.

Design data architecture so this can be added without major restructuring.

66. PAYMENT

Current payment may happen online or offline.

Payment gateway is NOT required initially.

Architecture must support future integration such as Razorpay.

Membership profile creation must only happen after admin confirms payment.

Never assume gateway payment is the only valid payment type.

67. APPLICATION QUALITY STANDARDS

This is NOT a prototype.

Treat as production client software.

Requirements:

Type-safe code

Reusable components

Consistent naming

Clear folder architecture

Database migrations

Validation

Error handling

Loading states

Empty states

Responsive design

Accessibility

Secure authentication

Auditability

Maintainability

Documentation

68. DO NOT

Do NOT:

Hardcode member information into frontend components.

Hardcode chapters.

Hardcode categories.

Hardcode counts.

Store important data in JSON files instead of database.

Use localStorage as primary business database.

Store uploaded files permanently in app filesystem.

Give every administrator unrestricted access.

Allow members to directly publish profile edits.

Allow duplicate active categories within the same chapter.

Build chatbot before data foundation exists.

Build every future feature in the first phase.

Rebuild the entire system in one Claude Code session.

69. DEVELOPMENT APPROACH

Development MUST occur phase-by-phase.

At the end of every phase:

1. Run linting
2. Run type checking
3. Run tests
4. Manually inspect core flows
5. Verify responsive behaviour
6. Verify no existing functionality was broken
7. Commit stable version to Git
8. Document what was completed
9. Document known issues

10. Only then proceed to next phase

70. PHASE STRUCTURE

PHASE 0

Architecture & Project Setup

PHASE 1

Public Website UI

PHASE 2

Database + Authentication + Admin Foundation

PHASE 3

Chapters + Companies + Members + Categories

PHASE 4

Member Directory + Individual Member Profiles + Search

PHASE 5

Blogs + SEO/AEO/GEO + Author System

PHASE 6

Testimonials + Feedback + Website Content CMS

PHASE 7

Membership Application + Category Availability + Waiting List

PHASE 8

Visitor Registration + Meetings + Events

PHASE 9

Reporting + Excel/CSV/PDF Exports + Weekly Reports

PHASE 10

Analytics + Search Console + Technical SEO + Schema

PHASE 11

Member Login + Profile Edit Approval Workflow

PHASE 12

Ask BWF RAG Chatbot

PHASE 13

Email / Notification Automation

PHASE 14

Production Security Review + Performance + Backups + Deployment

PHASE 15

Legacy Website Migration + Redirects + Production Cutover

71. FUTURE PHASES

After Website V2 stabilises:

Referral System
Business Tracking
Thank You Slips
Attendance
QR Attendance
One-to-One Tracking
Member Scores
Renewals
Razorpay
WhatsApp Business API
AI Blog Assistant
AI Management Reports
AI Member Matching
Advanced Lead Routing
Member Performance Analytics

72. IMPORTANT DEVELOPMENT RULE FOR CLAUDE CODE

When given this Master Brief:

DO NOT begin implementing every feature.

This document is the permanent architectural context.

Implementation instructions will be provided separately phase-by-phase.

For each phase:

Only implement functionality explicitly requested in that phase.

However:

Do not make decisions that contradict future requirements defined in this Master Brief.

If a future requirement requires an architectural consideration today, design for compatibility without prematurely building the future feature.

73. FIRST PRINCIPLE

The ultimate goal is not:

"Build a beautiful BWF website."

The goal is:

Build a scalable digital operating platform for Builders World Forum, beginning with a premium public website and progressively expanding into membership, chapter management, events, reporting, analytics, automation and AI.

The public website is the frontend of a larger BWF digital infrastructure.

Every technical decision should reflect that.

Main correction to the existing brief

I would replace the current visual-direction section with this:

Revised BWF Visual Direction

Core positioning:

A highly exclusive **private business members' club for the construction ecosystem.**

The website should feel like entering a premium private club rather than browsing a networking organisation.

The visual language should combine:

Old-world luxury + modern digital sophistication + architectural richness.

Colour palette

The reference uses dark emerald and warm bronze. Since you specifically want BWF to move towards blue, I would **not copy the green literally**.

Instead use:

- **Midnight Navy** — dominant background
- **Deep Petrol Blue / Blue-Teal** — secondary sections
- **Near Black Navy** — dark contrast areas
- **Antique Gold / Bronze** — buttons, borders, highlights
- **Warm Ivory / Champagne** — primary text
- **Muted Grey-Blue** — secondary text

Avoid bright corporate royal blue.

Think more:

Ralph Lauren private club + luxury hotel + elite construction business network

rather than:

corporate technology company.

1. Full-bleed architectural photography

This is probably the most important design cue from your reference.

The website should use **large cinematic architectural imagery**, especially:

- Premium homes
- Luxury interiors
- Architecture
- Commercial buildings
- Construction craftsmanship
- High-end materials
- Business networking environments
- BWF events

Not generic stock photographs of people wearing helmets and shaking hands.

The photography itself should communicate:

construction + success + wealth + sophistication.

2. The homepage should be editorial, not card-heavy

I would specifically tell Claude:

Avoid creating the entire homepage using repetitive rounded cards.

Most AI-built websites end up looking like:

card card card → icons → card card → CTA

That would destroy this aesthetic.

Instead use:

Large imagery → typography → editorial sections → asymmetrical image grids → strong dark blocks → restrained cards only where functional.

3. Typography should change

Your reference uses very dramatic display typography.

For BWF, I would use two complementary font families:

Display / Headline

An elegant editorial serif or luxury display typeface.

Used for:

Builders World Forum
Where Chennai's Construction Leaders Connect
The Network Behind the Built World

Functional / UI typography

A clean modern sans-serif.

Used for:

Buttons
Navigation
Forms
Admin panel
Member information
Filters

This combination will make the public website feel premium without compromising usability.

4. Navigation

The top navigation in the reference is very minimal.

I would adopt that philosophy.

Desktop navigation could be:

About
Chapters
Members
Insights
Events

Then two strong CTAs:

Visit BWF

Apply for Membership

And perhaps a discreet:

Member Login

Avoid 12–15 navigation links across the top.

Everything secondary can go under menus or footer.

5. Hero section

I would now change the homepage hero from a conventional corporate hero.

Something closer to:

BUILT ON CONNECTIONS.

Where Chennai's construction leaders do business.

Builders World Forum brings together selected professionals across the construction ecosystem within an exclusive chapter-based business community.

[Visit a Chapter] [Apply for Membership]

Background:

Full-screen premium architectural/interior video or photograph.

Very minimal text.

Large typography.

This would immediately create much more prestige.

6. Use oversized typography

One thing I particularly like from your reference is how the typography itself becomes part of the design.

We can use large section statements such as:

03

ACTIVE CHAPTERS

ONE CATEGORY.

ONE MEMBER.
PER CHAPTER.

THE PEOPLE

BEHIND THE
BUILT WORLD.

BUSINESS

BUILT THROUGH
RELATIONSHIPS.

These can create a much more distinctive BWF identity.

7. Chapter section

Instead of three normal cards saying:

Chapter 1
Chapter 2
Chapter 3

make each chapter feel exclusive.

For example, large photographic panels:

CHAPTER 01

20 Members
Chennai

Explore Chapter →

Then Chapter 02, Chapter 03.

Possibly horizontal scrolling on desktop/mobile.

8. Member profiles should follow the luxury theme

The public member profiles should **not look like LinkedIn profiles**.

Instead:

Large member/company hero.

Then editorial sections:

The Member

The Business

Expertise

Selected Projects

Services

Connect

Use large photography and clean spacing.

This makes the member's profile itself feel valuable.

9. Member directory should be more functional

Here we should intentionally break from the reference.

The directory needs usability.

So:

Dark luxury shell + highly functional search interface.

For example:

Find a BWF Professional

Search by service, company or member...

Then:

Chapter | Category | Location

Results underneath.

Design luxury, interaction simple.

10. Gold/bronze accents

I would change our earlier recommendation from generic “metallic accents” to specifically:

Warm antique gold / bronze

Use it sparingly for:

- Thin borders
- CTA outlines
- Numbers
- Section labels
- Hover states
- Small icons
- Dividers

Not entire gold backgrounds.

That keeps it expensive-looking rather than flashy.

11. Buttons

Reference uses pill-shaped outlined luxury buttons.

We can borrow this.

Primary button:

Bronze/gold fill + dark navy text

Secondary:

Transparent + thin bronze border

Avoid very rounded SaaS-style bubbly buttons.

A moderate radius is fine.

12. Image grids

I would definitely incorporate the visual pattern where:

one large image

is followed by:

two offset images

or:

large + narrow vertical image

or:

full-width image.

This works particularly well for:

About BWF

Show:

Architecture

Meetings

Member businesses

BWF Community

Events

Networking

Business introductions

Success Stories

Project images + member portraits.

13. Dark section transitions

The screenshot essentially maintains a dark environment throughout.

I recommend doing the same.

Instead of:

White → grey → white → blue → white

use:

Midnight navy → petrol navy → photography → near-black navy → deep blue

This gives much stronger visual consistency.

Some lighter ivory areas can appear strategically, but should be rare.

14. Admin panel should NOT use this design heavily

Important distinction.

The **public website** can look like this.

The **admin panel** should not.

Admin must prioritise:

- Speed
- Readability
- Tables
- Filters
- Forms

Reports
Data density

So I would keep the brand colours, but make the admin much cleaner.

For example:

Dark navy sidebar

Light/neutral workspace

Gold accents

Clear tables

Functional forms

The admin should feel more like **Stripe/Linear/Notion-quality enterprise software**, not a luxury magazine.

15. Member portal can sit between both

Member portal:

More premium than admin.

Less theatrical than public website.

Could maintain:

Dark navy
Gold highlights
Profile photography
Clean dashboards

16. Avoid excessive animations

The reference lends itself to cinematic animations, but I would keep them restrained.

Use:

- Slow image reveal
- Fade/slide entrance
- Gentle parallax
- Text reveal
- Subtle hover zoom
- Section transition
- Navigation animation

Avoid:

- Objects flying around
- Cursor gimmicks
- Heavy 3D effects
- Constant movement
- Long intro animations

It is still a business website.

17. Homepage architecture I'd now recommend

Based on this visual direction:

01 — Hero

Cinematic architecture + BWF positioning.

02 — Introduction

Short editorial statement about BWF.

03 — Key Numbers

03 Chapters / Members / Categories / Business.

04 — Why BWF

Category exclusivity + specialised construction ecosystem.

05 — Chapters

Large chapter visual panels.

06 — Find a Professional

Interactive member discovery.

07 — Inside BWF

Photography from meetings/events.

08 — Business Through BWF

Success stories.

09 — Selected Members / Categories

Professional discovery.

10 — Insights

Latest SEO blogs.

11 — Testimonials

12 — Upcoming Meetings & Events

13 — Membership CTA

Large closing statement:

YOUR CATEGORY.

YOUR CHAPTER.

YOUR NETWORK.

Check Availability →

18. One thing I would NOT copy

The screenshot appears AI-generated, and some of the typography/navigation text is gibberish.

So I would tell Claude explicitly:

Use the screenshot only as a **visual mood and composition reference**. Do not reproduce its text, exact layout, imagery or branding.

We want the **design language**, not a clone.

Final style definition for Claude

I would add this exact statement to the Master Brief:

BWF should visually resemble an exclusive private members' club, luxury hotel lounge and architectural editorial publication more than a conventional networking website. Use cinematic architectural imagery, midnight navy and petrol-blue surfaces, restrained antique-gold accents, oversized editorial typography, sophisticated serif/sans-serif pairing, large image-led layouts and generous spacing. The public site should feel prestigious and immersive while all operational areas such as search, forms, member directory and admin remain extremely functional and easy to use. Avoid generic SaaS cards, template-like corporate layouts and common construction-industry clichés.

That is a much stronger and more precise design direction than the original brief.

I would now consider the **visual direction sufficiently defined** to start Phase 0 and Phase 1.
